Bank Reconciliation Troubleshooting

Skyward's Bank Reconciliation feature is a great time saver and helps with internal control of cash management. When the reconciliation does not reconcile, what do you do? In this session, we will discuss steps to help you complete your reconciliation. We will discuss:

- Configuration settings that affect how you reconcile
- How the way you enter and/or update data affects how you reconcile
- Reports that can help identify variances
- How to verify bank direct deposit totals when you allow "Additional Direct Deposits"

Step 3 – Compare Sources (Bank & GL)

Dates are Important

- Top of form (Bank) based on Transaction Dates
- Bottom of form (GL) based on Post Dates

Compare

- CR and JE sources should match by individual items, if using individual batches
- If not using individual batches, run General Inputs Listings

Step 3 – Compare Sources (Bank & GL)

Compare

- Filter Bank AP source (Bank) for current month
- Run Vendor Check History to support GL AP source
- Common issues:
 - Void Checks (Check Date vs. Void Post Date)
 - Wire Transfers (Check Date is Due Date; Post Date is date invoice updated)
 - Void Wire Transfers (Displays in month Void posted to check history-defect; Post Date is date void is updated)
