Practice Makes Perfect - Maintaining a Training Database

Maintaining a Training Database

- What is a Training Database?
- Training Database Policies
- Refreshing a Training Database “Do(s)/Don’t(s)”
- Outline steps to Refresh a Training Database

Training Database Policies

Training Database Policies

- Free setup for new customers
- Free support of first year as Skyward customer
- Setup/Support is billable after the first year
- Skyward will provide training on Training Database set up

Refreshing a Training Database

- We don't recommend you do this without training
- Missing steps can be dangerous to your live data!

- Managed Services customers may request a training database restore monthly, if needed.

Overview of Refreshing a Database

1. Export System Configuration from Training Database
2. Stop Training Database
3. Restore a backup of production database over the Training Database
4. Start Training Database (disable AI if active on production)
5. Start Training WebSpeed Broker (ex. wsEAplusTrn, wsFinTrn) and Report Queue
6. Import System Configuration
7. Pause All Scheduled Tasks
8. Restart Training Services (ex. CAS, SkyRAS)
